

Twenty-Fourth Biennial Report

OF THE

Department of Agriculture

State of Florida

From July 1, 1934, to June 30, 1936

NATHAN MAYO
COMMISSIONER OF AGRICULTURE
Tallahassee, Fla.

LETTER OF TRANSMITTAL

DEPARTMENT OF AGRICULTURE
STATE OF FLORIDA
OFFICE OF COMMISSION

*To His Excellency
Hon. Fred P. Cone,
Governor of Florida.*

SIR: I herewith submit to you the Twenty-Fourth Biennial Report of this Department for the fiscal year—July 1, 1934, to June 30, 1936.

NATHAN MAYO,
Commissioner of Agriculture.

January 6, 1937.

PERSONNEL OF THE STATE DEPARTMENT OF AGRICULTURE

NATHAN MAYO, *Commissioner of Agriculture*
 MRS. E. E. SELMAN, *Secretary to Commissioner*
 T. J. BROOKS, *Assistant Commissioner*

DIVISION OF AGRICULTURE AND IMMIGRATION

MRS. VERA LEVERETTE, *Stenographer and Filing Clerk*
 G. W. BRITT, *Clerk*
 MRS. JOHN O'NEILL, *Stenographer*

INSPECTION BUREAU

PHIL S. TAYLOR, *Supervising Inspector*
 MRS. BESSIE GIBBS PORTER, *Secretary*
 MRS. DORIS DALLAS, *Stenographer*
 G. G. THARPE, *Cashier and Bookkeeper*
 MRS. EDITH WEIR, *Registration Clerk*
 LEE THOMPSON, *Clerk*

CLASSIFICATION OF INSPECTORS

FEED, FOOD, DRUG, GASOLINE AND OIL INSPECTION:

ANTONIO DIBONI, <i>Tampa</i>	WILLIAM MCCARREL, <i>Jacksonville</i>
H. R. FERRAN, <i>Eustis</i>	M. F. MCKAY, <i>Tampa</i>
G. F. FLETCHER, <i>Tampa</i>	C. A. PARKER, <i>Lakeland</i>
J. B. HIRES, <i>Miami</i>	C. A. PETERS, <i>Miami</i>
ROY HUTCHINSON, <i>Tallahassee</i>	J. B. TAYLOR, <i>Jacksonville</i>

FERTILIZER INSPECTION:

WILLIAM O'BRYAN, *Clerk*

J. L. CARROLL, <i>Marianna</i>	R. F. MILLIKIN, <i>Palatka</i>
J. W. DAVIS, <i>Ocala</i>	R. R. ROPER, <i>Winter Garden</i>
O. H. LEIFESTE, <i>Ft. Myers</i>	RUPERT SMITH, <i>Arcadia</i>
NAT MAYO, <i>Ocala</i>	J. B. WILKERSON, <i>Pensacola</i>

EGG INSPECTION:

W. S. McLIN, Jr., *Clerk*

H. W. ANDERSON, <i>Greensboro</i>	N. G. NICOLL, <i>Lakeland</i>
H. M. BAKER, <i>West Palm Beach</i>	PETER L. ROLLO, <i>Pensacola</i>
HARRY E. BUNKER, <i>Jacksonville</i>	SINCLAIR WELLS, <i>Lake City</i>
W. C. GIBSON, <i>Miami</i>	F. P. WOODWARD, <i>Tallahassee</i>
THOS. J. MULLIN, <i>Miami</i>	

NOTE:

Inspectors are classified for convenience of records. The duties of a majority of the personnel, however, cover some phase of activity in each division.

LAND DIVISION

F. E. BAYLESS, JR., *Chief Clerk*
 H. L. SHEARER, *Clerk*
 MISS HELEN PARKS, *Stenographer*

FIELD NOTE DIVISION

MISS BESSIE DAMON, *Clerk*

PRISON DIVISION

T. E. ANDREWS, *Chief Clerk*
 WALTER ROBERTS, *Clerk*

FROZEN DESSERT INSPECTION

ALEX G. SHAW, *Inspector*

AGRICULTURAL MARKETING BOARD MEMBERS

FRED P. CONE, *Governor*
 NATHAN MAYO, *Commissioner of Agriculture*
 L. M. RHODES, *State Marketing Commissioner*

STATE MARKETING BUREAU DIVISION

204 St. James Building, Jacksonville

L. M. Rhodes	Commissioner
Neill Rhodes	Assistant Commissioner
S. W. Hiatt	Specialist, Fruits and Vegetables
L. H. Lewis	Specialist, Live Stock and Field Crops
F. W. Risher	Specialist, Poultry and Dairy Products
F. H. Scruggs	Specialist, Market News
O. W. Cordero	Telegrapher
Effie L. Cureton	Stenographer
Edna Rosenkranz	Stenographer
Kathryn L. Vernon	Stenographer
Sara Wright	Stenographer
W. L. Jackson	Multigrapher
M. S. Knight	Clerk
Jas. McKelvy	Assistant Multigrapher

CITRUS COMMISSION

L. L. CHANDLER, *Chairman*F. E. BRIGHAM, *Secretary*ROBT. STUART, *Chief Clerk*CHAS. F. CHASTAIN, *Clerk*LALLA DAVIS, *Stenographer*LILLIAN C. WILLIAMS, *Stenographer*ANNIE G. HULL, *Stenographer*FRANK GILLESPIE, *Field Agent*

MEMBERS—John D. Clark, E. W. Hart, A. S. Herlong, L. P. Kirkland, J. M. Knight, B. E. Smith, C. E. Stewart, W. L. Story, Thomas Swann.

E. G. GRIMES, *Attorney*

MILK CONTROL BOARD

W. HENRY BRYANT, *Director*MRS. RUBY F. PORCH, *Secretary*F. H. MCFARLAND, *Chief Deputy*LESTER CRUM, *Auditor*

DEPUTY COLLECTORS—R. B. DuBois, M. A. Spruill, Virgil A. Ector, H. S. Cameron, Wm. Norona, Lester Ivey, W. M. Buford, Vaughn S. Getts, L. L. Kersey, John C. Wynn, Fred Wegant.

ATTORNEYS—Walsh Beckham & Ellis, Lawrence Truett, W. C. Brooker, M. C. Scofield.

MILK INSPECTION SERVICE OF THE INSPECTION
BUREAU, GAINESVILLEJOHN M. SCOTT, *Chief Milk Inspector*MISS DOROTHY BEST, *Stenographer*J. M. BURGESS, *Inspector, Tallahassee*LEWIS T. SMITH, *Inspector, Jacksonville*DR. GEO. S. DAVIS, *Veterinarian*

CHEMISTRY DIVISION

J. J. TAYLOR, *State Chemist*MISS MURIEL ROSE, *Stenographer*MISS LOUISE COVINGTON, *Clerk*

ASSISTANT CHEMIST—Gordon Hart, J. K. Lawton, R. M. Smith, E. J. Raudenbush, C. Perry Coleman, Chas. R. Woolery, Jr., E. Peck Greene, B. Jay Owen.

STATE LABORATORY OPERATING UNDER CHAPTER
16083

NALLS BERRYMAN, *Oil Analyst*
SIDNEY D. ANDREWS, *Assistant Analyst*
KAY JOHNSON, *Stenographer*
P. M. NASWORTHY, *Pump Mechanic*
W. E. BUHRMAN, *Asst. Oil Analyst, Field Laboratory No. 1*
JAS. S. MCCAWLEY, JR., *Clerk*
W. Y. GARY, *Asst. Oil Analyst, Field Laboratory No. 2*
JACK D. MCALILY, *Clerk*

COMMISSIONERS OF AGRICULTURE OF FLORIDA
AS REGISTER OF LANDS—

John Beard: January 12, 1847, to May 29, 1849.
David S. Walker: November 23, 1850.
Hugh A. Corley: Dec. 31, 1859, to Dec. 31, 1866.

AS COMMISSIONER OF IMMIGRATION—

Oscar E. Austin: August 7, 1868.
J. S. Adams: January 14, 1869, to January 16, 1873.
Dennis Eagan: March 4, 1873, to 1877.
Hugh A. Corley: January 3, 1877, to March 16, 1882.
P. W. White: March 16, 1882, to February 12, 1885.

AS COMMISSIONER OF LANDS AND IMMIGRATION—

C. L. Mitchell: January 29, 1885.

AS COMMISSIONER OF AGRICULTURE—

L. B. Wombell: December 31, 1888.
B. E. McLin: January 1, 1901, to March 1, 1912.
W. A. McRae: March 1, 1912, to October 31, 1923.
Nathan Mayo: November 1, 1923.

PREFACE

In presenting this Biennial Report, I wish to call attention to the fact that we issue six Biennial Reports, which can be had on request:

1. Financial—Receipts and Disbursements for account of Department as a whole. This report also contains statistical and other information relating to State Resources and Immigration, State Advertising, Inspection of Pure Foods and Drugs, Stock Feed, Fertilizer, Gasoline and Oil, Egg and Poultry and Dairy Products.
2. Land and Field Note Division.
3. Prison Division.
4. Chemistry Division.
5. State Marketing Bureau.

The Constitution of the State of Florida sets forth the duties of the Commissioner of Agriculture. It says that the Commissioner shall perform:

1. "Such duties in relation to agriculture as may be prescribed by law."
2. "Shall have supervision of all matters pertaining to public lands."
3. "Shall keep the Bureau of Immigration."
4. "Shall perform such other duties as may be prescribed by law."

I will name a few of the measures that have been enacted into law, broadening the scope of the Department in its agricultural and inspection work.

1. The Law Prohibiting the Sale of Immature Fruit.
2. The Frozen Fruit Law.
3. The Arsenical Spray Law.
4. The Standardization Fruit and Vegetable Law.
5. The Milk and Milk Products Law.
6. The Ice Cream Law.
7. The Commercial Fertilizer Law.

8. The Commercial Feeding Stuffs Laws.
9. The Agricultural Marketing Law.
10. The Pure Food and Drug Law.
11. The Advertising Law.
12. The Gasoline Inspection Law.

 Turkey Production and Marketing, 1936.

FACTS ABOUT YOUR STATE DEPARTMENT OF AGRICULTURE

BY COMMISSIONER NATHAN MAYO,

State Department of Agriculture

It has been my opinion, during the years that I have held public office, that the electorate is entitled to a comprehensive report, an unadorned statement of fact, from the men it elects to direct its functions of government. Your active participation in your state's business affairs is your best assurance of good government. This series of talks is planned to give you facts about your State Department of Agriculture and I am grateful for this opportunity to speak directly to the people of our state.

Many changes and innovations in the state government have taken place since I have been your Commissioner, and, as change is an index of healthy growth, so have these changes been indicative of our state's progress. And some of the most important changes of this period have taken place in the Department of Agriculture by the passage of laws that broadened the scope of the department. Briefly these laws, or their amended forms, are: the law prohibiting the sale of immature fruit, the frozen fruit law, the arsenical spray law, the standardization fruit and vegetable law, the milk and milk products law, the ice cream law, the commercial fertilizer law, the commercial feeding stuffs law, the agricultural marketing law, the pure food and drugs law, the advertising law, the gasoline law and the egg classification law.

Most important of the above named laws are those dealing with law enforcement with which this department is charged. Of necessity these laws have become more varied and more numerous as demands for your protection from unscrupulous and dishonest practices in the handling of food and other products became more urgent.

Merely naming these laws means very little compared to the processes involved in their enforcement. Just picture to yourselves some of these processes. For instance, the efficient enforcement of six of these laws requires the specialized serv-

ices of a highly trained chemist and his assistants, two laboratories, and a score of inspectors. These six laws are those affecting Florida fruit, commercial feed stuffs, food and drugs, gasoline and commercial fertilizers. In the conscientious enforcement of these and other laws rests the protection of your health and your purse.

Inspectors employed by the department are carefully chosen for their high intelligence and character, so that the state may have the very best class of service in its difficult work of enforcement. At present sixteen regular inspectors are employed and during the period of enforcement of the fruits maturity law, otherwise known as "The Green Fruit Law," over two hundred inspectors are seasonally employed. However, an adequate number of inspectors is regularly retained to insure the proper enforcement of all laws administered by the department.

Although enforcement and its entailment occupy a large part of the department's activities, it is not, by any means, all that is required of it; its other duties are many and varied. In this series of talks, these activities will be taken up and dealt with as separate subjects. The eight divisions of the State Department of Agriculture that function to carry out the provisions of the laws relating directly to the department are the divisions of immigration and agriculture, of prisons, of chemistry, of dairying, of land, of field notes, of inspection and of state marketing, the last being known as the State Marketing Bureau. All of these divisions are related, of course, although their functions, in some instances, differ widely. Some are necessarily located in parts of the state distant from the capitol, such as the State Marketing Bureau, which is located in Jacksonville, a commercial center of the state; and the green fruit laboratory, which is operated in Winter Haven, a citrus center of the state. From this point also the citrus inspection is conducted. All inquiries about these divisions, or any other questions about your State Department of Agriculture will be answered promptly and courteously. For further information write Department of Agriculture, Tallahassee.

THE STATE MARKETING BUREAU AND ITS WORK

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

In this short review of the work of the State Marketing Bureau, which is an important and efficient part of your State Department of Agriculture, it is interesting to note that it was one of the first of such bureaus to be established in the United States. It began operation in 1917, just four years after the United States Bureau of Markets was established and three years after New York's history-making department of Foods and Markets came into existence. So Florida's marketing bureau is a real pioneer in its field.

Many changes have necessarily taken place since the bureau commenced serving the farmers and producers of our state. In fact, the marketing bureau idea itself has undergone some revolutionary changes. One explanation of these changes is that the farmer, in times past, viewed the marketing problem as consisting of two parts only, himself and the middleman. He left the final buyer out of the picture. This was probably due to the magnified importance he attached to the old notion that he gets, on the average, only 35% of the prices finally paid for his products. In fact, the movement which brought about the establishment of some of the first state bureaus and departments of marketing was founded on this belief. There are, of course, three factors in modern marketing: the producer, the distributor and the consumer. Now, more attention is being given to consumer demand and its relation to production. There has been, in late years, a swing away from the original conception of the purposes of a marketing bureau as an agency that could eliminate all middleman's expense in marketing transactions, toward a clearer recognition that production, which the farmer represents, is directly related to consumer ability and disposition to use and to pay for products.

These are some of the general trends that have affected our marketing bureau and to which it has had to adjust itself and its operations. Some others are of more local importance; the

Florida land boom and its aftermath, local conditions brought about by the depression with its ruinously low prices, and the bureau's supplementary service under the New Deal. In this last respect, the bureau has been called upon, and has extended its fullest cooperation with the federal authorities in preparing codes that are satisfactory and workable. It has aided the United States Department of Agriculture in establishing codes in citrus fruit and vegetables. Incidentally, increased demand for different services of the bureau has been brought on by the adoption of the various codes. It was necessary to increase the number of employes in the citrus market news office at Lakeland for supplying both auction and shipping point information to the Florida Control committee and growers throughout the state.

The furnishing of market news of various kinds is a large part of the work of this bureau. Accuracy and technical training are required to do this work efficiently. Some features of this service are: daily market reports in season; annual reports on carlot shipments of fruits and vegetables from Florida; packing and shipping information and complete market data on all products; official daily market reports of fruits and vegetables, poultry and eggs on the Jacksonville, Miami and Tampa markets; semi-weekly livestock report covering Jacksonville, the Southeastern livestock market and Chicago, issued from Jacksonville the year round, and complete market information on nearly all Florida's many products. The Market News Service covering the productive areas of 98% of the state, sent out from nine different stations, has provided reliable, authentic information on the movement and sale from \$110,000,000 to \$125,000,000 worth of agricultural products from Florida, and full information in regard to competitive commodities from other states.

Regarding shipping point inspection and terminal inspection, the bureau cooperates with the federal bureau of agricultural economics. It will be remembered that the federal inspection is of two kinds: shipping point inspection for grade standards and condition, and terminal inspection of perishable foods, the chief aim of which is to prevent and to settle rejec-

tion disputes. The fee on such inspection is then divided between both agencies by mutual agreement.

In its fourteen years of this cooperative service, the state bureau has assisted in the inspection of 200,189 cars.

Four marketing specialist are employed by the bureau. One of these is a market news specialist and others assist growers and shippers in marketing fruit and vegetables, in marketing livestock and field crops, and in marketing dairy products and poultry. The marketing commissioner and these assistants have, during past seven years, assisted in 1,815 sales at which the equivalent of 4,127 cars of live stock, eggs, wool, syrup, hay and corn were sold for cash amounting to more than \$3,664,000. In addition to these cooperative sales, the field men have assisted in selling from the office, livestock and miscellaneous products that total more than nine and one-half million dollars.

The publications issued by the bureau, besides strictly market news and statistics, include the "For Sale, Want and Exchange" bulletin and several other bulletins and pamphlets which have been compiled and written by the specialists on the staff. Twice each month, the "For Sale, Want and Exchange" bulletin assists agricultural producers in the purchase, sale and exchange of their products, farm implements, livestock, seed and a great variety of articles through its columns. The bureau also furnishes producers and shippers with a list of reputable dealers prepared from information supplied by disinterested agencies. In brief, the bureau performs practically every marketing service for the growers and shippers of Florida, except the actual selling and handling of the many products of the state in its own name.

The complexity of its work is noteworthy of this bureau. When it is remembered that it was necessary to blaze a trail at the time it was established, the directing of the work accomplished, no less than the work itself, commands our attention and our admiration. The Florida State Marketing Bureau is rated, by competent authorities, as the most outstanding in accomplishment and efficiency of all bureaus of its kind in the United States.

Through the cooperation of the Florida State Agricultural Marketing Board, the City of Sanford and Seminole County, the First State Market was built in Sanford during the latter part of 1934. It was dedicated on December 18th and opened for business on January 15th, 1935. The grounds on which the market is located cover twenty acres. The market platform is 618 feet long and 50 feet wide. Telephone and telegraph services are maintained in the building. A restaurant, ice house, crate material warehouse, and gasoline filling station are located on the premises. Federal and State market quotations are received daily through the cooperation of the State Marketing Board, and marked bulletins covering commodity prices on the market are issued daily through the cooperation of the Federal-State Market News Service. Federal and State vegetable and citrus inspectors are located in the building and are available at all times. A railroad siding enters the property where mixed cars can be loaded when and by whom desired. A small rental is charged the seller and there is no fee charged the buyer. The selling platform is divided into one hundred and eight separate stalls or booths. On June 30th—just twenty-four weeks after the market opened—cash sales from the market platform reached a total of \$518,625.00.

Believing the activities and accomplishments of the above stated plant will be of considerable interest, we quote part of report for the second season, or 1935-1936:

“(a) General—The Sanford State Market has not, so far, engaged in the shipment of straight carloads of fruits and vegetables, although a few straight carloads of various commodities have been sold. The far greater portion of the sales that have been made have been to truck buyers in quantities ranging from one package to as high as ten tons. Some mixed carloads have been sold and loaded but comparatively few. Most straight carloads of both fruit and vegetables that leave Florida every season are shipped by, or through, the large distributors and shipping organizations. Comparatively few farmers are, by themselves, in position to load, sell and ship a straight car of any one commodity for his volume is not sufficient to load cars to capacity and thus take advantage of carload freight rates. Since the advent of the truck buyer

the paying of express charges on shipments by railway express have become prohibitive.

"Therefore, these less than carload farmers and growers have been hard put to sell their products to advantage, although the aggregate of the products grown by the small farmers is surprisingly large.

"The primary purpose, then, of the establishment of the Sanford State Market was to furnish an outlet for the products of the small farmers and growers. However, it does NOT follow that the larger farmers and shipping organizations are not wanted on the Market. Their representation is badly needed together with their initiative and approved business methods. Their cooperation has always been actively solicited and it has been freely given and is appreciated.

"Since the Sanford Market is, at present, primarily a truck and mixed car assembling and sales point, a short study of the requirements in the matter of saleable merchandise should be made. Mixed cars cannot be loaded until an adequate supply of the proper varieties of vegetables and fruit is available for loading. The same applies to trucks for most of the truck buyers prefer mixed loads. This being the case, the Market should have available at all times as complete an assortment of saleable merchandise as it is possible to get together.

"(b) Sources of Supply—Florida is one of the larger states. It extends south from the Georgia line approximately three hundred seventy-five miles exclusive of the 'keys.' Sanford is located slightly north of the half way point in the peninsular and the Market is, therefore, ideally located for the convenience of truck buyers, mixed car loaders, and farmers and shippers to the south.

"Due to the fact that it is about two hundred fifty miles from Sanford to the farthest south growing sections, these various shipping sections are generally harvesting the same varieties of vegetables at different times. Dade County, far south, harvests Beans and Tomatoes in the late Fall and Winter. Central Florida counties harvest Beans and Tomatoes in the Fall and Spring. The same applies to other commodities and shipping sections. Some counties specialize in certain commodities. In Seminole County it is Celery; Sumter County, Cucumbers; Dade County, Tomatoes; Palm Beach County and Broward County are strong for Beans.

"These facts being true, if buyers are to be properly taken care of as to their supplies, it is very necessary that

some arrangement be made to have a full supply of all commodities available at all times. It is for that reason that special effort is made to have as many shipping sections represented on the Market as possible.

"During the 1935-36 season, just closed, supplies have been brought into the Sanford Market from twenty-five counties as follows:

Brevard	Hillsborough	Palm Beach
Broward	Indian River	Polk
Charlotte	Lake	Sarasota
Dade	Lee	Seminole
De Soto	Manatee	St. Lucie
Glades	Martin	Sumter
Hardee	Okeechobee	Volusia
Hendry	Orange	
Highlands	Osceola	

"(c) Distribution—The question naturally arises as to where the merchandise went to after being brought to the market and sold.

"Truck buyers who made purchases during the past season hauled these products into the following states:

Georgia	Arkansas	Indiana
South Carolina	Tennessee	Illinois
North Carolina	Kentucky	Michigan
Virginia	Maryland	Wisconsin
West Virginia	Pennsylvania	Minnesota
Alabama	New Jersey	North Dakota
Mississippi	New York	Quebec, Canada
Louisiana	Connecticut	and Ontario,
Texas	Ohio	Canada.

"A total of twenty-six States and Canadian Provinces, and distributed to approximately four hundred cities and towns.

"By far the greater part of the merchandise distributed by these truck buyers into the states named above went into the smaller cities and towns which are not ordinarily what would be termed carlot markets. While it is true that practically all of these smaller markets could have procured the merchandise without this 'direct service,' it is believed that the ultimate cost to the consumer in dealer profits, additional freight or hauling charges, etc., would have been considerably higher and, consequently, would have lessened the demand for Florida products. Most truck buyers sell in these smaller markets either direct to the local produce merchant or direct to the retail store. If it were otherwise these local merchants would have to order their supplies

from the larger carlot markets, pay a profit to the carlot receiver, and then pay a delivery charge either in freight or drayage for transportation to their stores.

DIFFICULTIES ENCOUNTERED SINCE THE MARKET'S ESTABLISHMENT

"In the report of the activities of the Market for the season 1934-35 it was brought out that the freeze of December, 1934, delayed the opening of the Market until January 15, 1935. This freeze also caused a shortage of supplies for the Market during the early weeks of its operation. However, during March and April, 1935, a good volume of business was transacted and at the close of the fiscal year, June 30, 1935, total sales had reached approximately \$518,625.00.

"It was reasonable then to presume that during the season, 1935-36 gross sales should reach \$1,000,000 inasmuch as operations were expected to begin on November 1st and continue until June 30th. On November 1st all sales space on the Market platform had been rented, which was not the case in 1934-1935, and everyone connected with the Market fully expected a \$1,000,000 'gate' which was a very reasonable goal to strive for.

"However, powers over which no one had any control stepped into the picture and at the close of the season total gross sales had only reached \$662,844.05.

"Factors contributing to this loss in sales were as follows:

Oct. 1 to	Continued rains in the Lower East Coast and
Oct. 15	Lake Okeechobee growing sections causing serious damage to all growing crops and impairing quality.
Nov. 1 to	During this period the Lower East Coast was
Nov. 10	subjected to a tropical hurricane damaging practically all growing crops and wind-whipping crops in the Lake Okeechobee sections.
Dec. 1 to	Repeated freezes and frosts in practically all
Feb. 10	growing sections in Central, East Coast and West Coast, Florida, damaging practically all vegetables or retarding their growth.
Feb. 25 to	Heavy rains in Lake Okeechobee sections dam-
Feb. 29	aging crops.
Mar. 14 to	Heavy rains in Dade County and Broward
Mar. 16	County damaging crops, especially Tomatoes, Peppers, Squash and Potatoes.
Apr. 1 to	Continued dry weather in Central Florida
May 15	impairing the yield of Spring crops.

"Another factor which added to the difficulties encountered was the fact that, due to freezing conditions in the

states north of Florida, roads were rendered almost impassable from snow and sleet. Trucks, in many cases, could not get through and when they did get through there was no regularity as to schedule. Dealers on the Market therefore could not foresee the demand. Many loads that were bought on the Market were frozen before they reached their respective destinations. Flood conditions during April in practically all states from New York south further complicated matters.

"For these reasons the volume of sales for distribution to points north of the North Carolina-Virginia line were considerably less than during the 1934-35 season. However, the volume sold for distribution to points south of the same line was considerably larger.

"In view of these conditions, those connected with the Market believe that the total volume of sales for the 1935-36 season was satisfactory.

RESULTS THAT HAVE BEEN OBTAINED

"The following is a brief resume of Sales, Tonnage, Dumpage, etc., for the season 1935-36 just closed:

Total Sales for the Season, 1935-36.....	\$ 662,844.05
Total Sales for the Season, 1934-35.....	518,625.00
<hr/>	
Total Sales to Date	\$1,181,469.05
Total Units Sold Season, 1935-36	531,306
If Commodities had been packed and loaded into Railway Cars, total cars loaded would have been approximately	1,133.41
Total Number Tons handled	12,929
Total Number Pounds handled	25,858,058
Approximate total of units dumped.....	7,123
Percentage of Dumpage as compared to total Units handled	1.4''

The above is, in short, the results that have been obtained to date. Detailed information as to sales, average prices, tonnage, dumpage, etc., of EACH commodity is not given here due to lack of space. However, the figures are available and will be given to any one interested.

In addition to the plant at Sanford, we are building and equipping five other plants; located at Ocala, Wauchula, Palatka, Live Oak and Chipley.

For further information about the State Marketing Bureau, write to the Department at Tallahassee, or State Marketing Bureau at Jacksonville.

FACTS ABOUT FLORIDA'S PRISON DIVISION

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

I am pleased to have this opportunity to say a few words to the people of Florida about their prison farm which is regarded by penal authorities as one of the most successful and most creditable institutions of its kind in the United States. The prison division takes up more of your Commissioner's time, to say nothing of patience, than any other of the divisions of the department. But here I wish to say that a large part of the credit for the good management under which this division is operated must go to my able assistants who have so admirably co-operated in upholding its high standard.

By constitutional provision in 1885, the State Commissioner of Agriculture was placed in charge of the state prison, but it was not until 1911 that the prison bureau was made a separate division of the department and a full time clerk designated to handle its affairs. Before this time, very few records had been kept since the bureau began operation away back in 1868, and such records as had been kept were inadequate. During the year 1913 the state purchased a large tract of land in Bradford county, and in November of that year began building a state owned institution. Then prisoners and equipment were moved from Marion county where the prison camp had been located.

This big prison farm at Raiford is really a city in itself where the inmates are engaged in industries and in farming operations. It forms a plant that is nearly self-sustaining as to common living requirements. Of the entire tract of 18,000 acres, 4,000 of these are under cultivation, and this farm supplies abundantly the ordinary farm products. Crops are made under careful and experienced supervision and marked success in special lines, such as poultry and dairy stock, has been achieved. The fine poultry plant that has been developed there was started by a life-terminer, and under his direction became, in its line, one of the show places in the state.

In the industrial end of this institution there are factories for making shirts, tanned leather and shoes, ice and many other

things needed and used in clothing, housing and feeding most comfortably a group like this; also, an efficient laundry, and up-to-date dairy, and many other enterprises that add to the health and well-being of those detained there. A big flock of turkeys is now being fattened to provide Christmas dinners at the farm. All of these advantages enjoyed by the inmates are earned by their own hands and through their own efforts. These activities give them an opportunity at healthful and co-operative occupation which is necessary in normal living.

There are many obvious advantages to the farm method of caring for prisoners: 1. They are better satisfied, and remain so, with agricultural work to do than with that of other types; 2. Outdoor work promotes health; 3. Farm work provides for a co-operative type of work and encourages the feeling that they are contributing to their own maintenance; 4. Farm work provides a larger amount of labor than machine, or other types of work, and it can be adapted to the largest number of laborers. In this connection, it may be pointed out that institutional charges, except where conditions prohibit, must be given outlets for energy and physical exercise.

Among the specialized industries at the prison farm are the automobile tag factory, at which licenses for cars are made, and a game bird hatchery and game preserve, from which areas in the state depleted in game are restocked.

The records show that for many years the population of this institution remained practically the same, and the receipts from the counties of the state varied but little from year to year. Immediately after the World War, however, the number of prisoners began to increase noticeably until 1932, when the peak was reached. During years of 1933 and 1934, up to June 30, 1934, the receipts decreased, and the average population decreased from more than 3,200 in 1932 to about 2,700 in 1934. During years 1935 and 1936, population has increased to about 3,315. While the records for past two years show a slight increase in receipts, the increase is due principally to a reduction in number of parols and pardons granted by the Pardoning Board.

These figures include prisoners at road camps as well as those at the State farm, and other State institutions. For the month of October, just ended, receipts showed the total of prisoners at the State farm to be 1,544. Very few of these undertake to escape. The percentage of those at large is very small due to the fact that escapes return voluntarily, or are picked up in short time and returned to the farm.

FACTS ABOUT THE INSPECTION BUREAU

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

Today the inspection division of your State Department of Agriculture has the spotlight, and I hope, in this brief summary, to give you an understanding of the work of this bureau which is so important to the department and to the state generally. With the supervising inspector and the different kinds of inspectors under him, rests the responsibility of enforcement of the state's regulatory laws. These laws relate to pure food and drugs, fertilizers, stock feeds, gasoline, eggs, poultry, fruit and other products handled commercially.

This division is essentially a vigilant organization. By that I mean that its men have ever to be on the alert and watchful to see that no spurious or adulterated products are fraudulently handled and offered for sale. This requires men of a high type of intelligence and integrity who can exercise constant vigilance where necessary and unusual activity if the situation warrants it. It is the policy of the department to prevent violations of law by co-operation and instruction rather than by using drastic measures of correction. But sometimes it is necessary to invoke the punitive provisions of the law, and, in such cases, sufficient time is taken to make the prosecution thorough and effective.

The total year-round inspection force numbers 28 men. This does not include citrus fruit inspectors, the greater number of whom are employed for a few weeks only during the beginning of the fruit shipping season. These 28 regular inspectors are evenly distributed over the state: six being located west of the Suwannee River, three on the upper east coast, five on the lower east coast, four on the lower west coast and ten in the central peninsular. Of these, nine inspectors are appointed for enforcement of the egg classification law, which is the most recently passed of the enforcement laws, and the remaining nineteen inspectors carry out the enforcement provisions of the food and drug laws, the gasoline law, the Frozen Dessert law, the fertilizer law and the feed stuffs law.

In order that you may gain some insight as to the activities of our inspection service, we have prepared a partial summary of six divisions as follows:

FOOD AND DRUGS

Food and drug stores inspected	30,442
Packages impure or adulterated food destroyed.....	188,650
Packages foods or drugs stop-saled	199,084

FERTILIZER

Stocks inspected	14,795
Samples drawn	5,404
Tons stop-saled account of deficiency	779
Tons stop-saled account of failure to tag properly.....	2,101

COMMERCIAL FEED

Stocks inspected	16,779
Samples drawn	1,440
Tons stop-saled account of deficiency	4,273
Tons stop-saled account of failure to tag properly.....	2,198

GASOLINE AND KEROSENE

Filling stations inspected	27,459
Pumps tested	57,729
Pumps found inaccurate (7 to 14 cu. inches).....	1,358
Pumps inaccurate more than 14 cu. inches and condemned	2,429

EGGS

Retail stocks inspected	58,944
Wholesale stocks inspected	8,357
Cases stop-saled account of improper labeling.....	1,595
Cases stop-saled account of deterioration	863

POULTRY

Retail stocks inspected	8,987
Wholesale stocks inspected	1,697
Stop-sales account of unhealthy or improper labels.....	234
Birds condemned	106
Birds destroyed	104

From the activities shown you will see that a certain amount of training is necessary to make one efficient in any of these lines. He has to know the laws pertaining to his bureau, or the part of the bureau he serves, and he has to know his territory. Enforcement is not, by any means, an easy task. Our inspectors are conscientious, tolerant and fair-minded, and each knows

well his territory and its people. They are glad to consult and meet with distributors, dealers and service men connected with every kind of business affected by the inspection work.

Inspection of poultry became effective July 1st, 1935, and our summary covers one year only. As more than half of the eggs and poultry consumed within the state are imported from other states, considerable thought and time is being given by inspectors to this phase of their work. Conferences are arranged with those interested, and judging from inquiries being made, both by letter and personal visits, production in the state should more than double within next three or four years.

The expenses of your State Department of Agriculture is self-sustaining through the inspection fees it collects. Not one cent from the tax money of the general revenue fund is used in its operation and maintenance. The total expense of the department is taken care of by the small inspection fees collected from fertilizer, feed and gasoline manufacturers, from wholesalers of eggs and poultry and from citrus packers and shippers.

The inspection bureau is pleased at all times to supply information on any matter pertaining to it. For further information, write your State Department of Agriculture, Tallahassee.

WORK OF THE CHEMICAL DIVISION

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

The Division of Chemistry:

I wish to say that it would be impossible to administer a number of very important laws without the services of this division. It serves the state in analyzing fertilizers, foods, drugs, stock feeds, gas, oils and in testing citrus fruit during the early shipping season. It is the duty of the State Chemist to analyze all samples properly submitted to him by inspectors in the department's employ. The main laboratory is in Tallahassee and a branch is located at Winter Haven while a laboratory truck does field analysis of gasoline.

For the calendar years 1934 and 1935, 20,489 analyses were made in the enforcement of the state's regulatory laws, such as the fertilizer law, the pure food and drug law and stock feed law. In order that you may know the scope of analyses made, we tabulate as follows:

Gasoline and kerosene samples.....	14,380
Official samples fertilizers	4,379
Special samples fertilizers (sent in by citizens).....	163
Official samples feed stuffs	767
Special samples feed stuffs	222
Official food and drug samples	511
Special food and drug samples (sent in by citizens).....	67

You will note most of the analyses were made on official samples sent into the laboratory by the regular inspectors of the department, while some were upon special and miscellaneous samples sent in by the citizens of the state.

The life of almost every individual in the state is, in some way, affected by the work of the chemical division in its purposes of guarding the health and well-being of the different groups of citizens affected by these laws. The farmer, the motorist, the stockman, the citrus grower, the dairyman, the housewife, the poultryman and practically all resident as well as most visitors to the State, are affected by the enforcement of the regulations governing food, stockfeed, citrus fruit, gasoline, fertilizers, etc.,

and all of this is dependent upon the chemical division for its proper means of enforcement.

The farmer, through the work of the state chemist, can be absolutely sure that when he buys fertilizers for his crops or his grove, he is going to get what he pays for, or get a settlement out of the fertilizer company for any deficiency. The law allows him to double the invoice value of the goods.

The gasoline analysis consists of samples from every boatload and every tank-car brought into the state. These are sampled by our regular inspectors, but our laboratory trucks are constantly going from place to place over the state making analyses of gasoline drawn from the filling station pumps. This analysis is made at the spot at which the sample is taken. If found to be adulterated, sale of that lot is immediately stopped. If found to be only slightly below standard, such as might occur from being old or "stale," the manufacturer is allowed to ship it back for blending and bringing up to standard. If kerosene has been added, as is sometimes the case, that lot of gasoline is condemned and not allowed to be brought up by blending.

Of particular interest to housewives, hotelmen and other purchasers of food and canned goods, is the work of the pure food division. This work is necessarily varied and extensive. It sometimes happens that unscrupulous grocers push their old stock of swelled canned goods off on the ignorant or unsuspecting customer. Others will add harmful preservatives to ground meat and hamburger to give it the bright red appearance of freshly ground meat. These are only a few of the mal-practices that department inspectors have to watch under pure food regulations. This inspection covers all of the ordinary articles of food and food products susceptible of adulteration or of dishonest handling.

The chemical division, like some other divisions of the State Department of Agriculture, is self-supporting. The expenses and upkeep are paid out of the inspection fees brought in by the laws which it helps to administer.

Although the office of state chemist was established in 1889, the chemical division was not made possible until 1901 when the legislature passed a law authorizing it. This law was passed

in compliance with demands from fruit and vegetable growers of the state who wished protection against the sale of misbranded and worthless fertilizers for which Florida was then rapidly becoming the dumping ground. From this single purpose, the division has expanded and it now covers a number of articles, as named above. This necessary expansion of the division took place as laws upon these articles were placed upon the statute books and its service was demanded in their enforcement. This office does not undertake to do analytical work for private parties. It has neither the authority nor the number of analysts that would be required for that extensive service.

For further information about the chemistry division of your State Department of Agriculture, write to the department at Tallahassee.

THE LAND DIVISION AND ITS FUNCTIONS

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

The land division is the most historical unit of your State Department of Agriculture. Indeed, its romantic past extends back to the very discovery of Florida by Spanish explorers, to the time when Spanish rulers made grants of sizable tracts of Florida lands to favored subjects. As different flags were raised over Florida, some of the lands of the territory continued in private hands, and these titles were preserved under transfer of government as rights of sovereignty. The land division, as final custodian of title authority for the state, is important to every property owner, as well as every prospective property owner, in the state. The original titles to more than two-thirds of all lands in the state of Florida are covered by records on file in this office.

The matter of land titles is a perplexing question to many people, consequently it is handed over to a lawyer or to an abstract and title expert by the average property buyer who feels much relieved to get this business of title straightening disposed of honestly and satisfactorily. Hence, general knowledge of titles remains professional. But it is necessary to know the status of lands in order to have the titles straight. Land titles in Florida are, in general, predicated upon (1) Spanish grants to individuals; (2) grants or patents from the United States to the Territory of Florida or to the State of Florida, or to private ownership of lands ceded to the United States by the treaty of Cession from Spain; (3) grants or conveyances from the State of lands granted, patented or approved to the state by the United States under various acts of Congress, or of lands under bodies of navigable water or tide lands, the two latter classes of lands belonging to the state by virtue of its sovereignty upon being "admitted into the Union on equal footing with the original States in all respects whatsoever."

But even more valuable to the people of the state at large is the preservation for them of the various classes of state lands. This work is an important part of the duties of the land division and one that requires highly specialized services. In this con-

nection, the land division operates under the direction of the Internal Improvement Board. In general, the kinds of lands that the state supervises or owns: (1) lands approved and patented by the United States to the State of Florida and known as swamp and overflowed lands and swamp indemnity lands, and (2) lands granted to the State of Florida by special acts of Congress, but not conveyed by patent and known as Internal Improvement lands, school lands, school indemnity lands, seminary lands and lands granted to the state specifically for railroads. Of these lands, the school lands are vested in the State Board of Education, while others named above are vested in the Internal Improvement Board.

The history of ownership of these lands may be seen in the records of these two boards, that of the Internal Improvement Board being probably more varied and colorful. When the first state constitution was drawn up in 1838, provision was made for a "liberal system of Internal Improvements." For the discharge of this undertermined but very important duty, the general assembly was to determine the "proper objects of improvement." These were decided to be construction of roads and canals and later there were added to the list railroads, bridges and levees. The outgrowth of legislative action on these improvements was the creation of the Internal Improvement Board in 1855. The minutes of the Trustees of Internal Improvement Fund relating to state lands are of general interest to the public as they show all their transactions and agreements. Copies of these minutes can be obtained by writing to the secretary of the Trustees. This department has nothing to do with the handling of the Internal Improvement Fund, but your State Commissioner of Agriculture is a member of this Board.

Under certain conditions, sales of state lands are made. There are no fixed prices on state lands and prices are put upon them upon application only, and then for acceptance of five days only.

When a deed to lands obtained by an individual from the state is lost and it is desirable to establish validity of title, a certificate of the record of the deed from the land office, signed by your Commissioner of Agriculture, will make this title valid. This instrument is permissible in all courts.

A special line of work of the land office is the preparation of an abstract which will correct all errors, show the various acts of Congress granting the different classes of land to the state, the dates of all patents and approved lists to the state and all conveyances out of the state, and out of the United States, and making a complete abstract of all conveyances by the United States to the state. For this abstract, it is necessary to make a most careful search of old files, abstracts and tract books in order to perfect the records. In doing this we continue to find tracts of valuable lands which were erroneously shown on the maps to have been conveyed long ago, that still belong to the state. It will be remembered that prior to 1877 no accurate records of copies of deeds were kept, and such as were kept are very imperfect. This abstract, when completed, will be a valuable state document.

Although the land division is now a part of your State Department of Agriculture, it is, nevertheless, its point of origin. Before the adoption of the present constitution in 1885, the head of this department was known as "Commissioner of Lands and Immigration." Agricultural development in the state increased and the duties of the Department were extended to other divisions, usually by legislative authority. But the land division remains a part of the department by first constitutional authority.

For further information about the land division, or about lands held by the state, write your State Department of Agriculture, Tallahassee.

THE HISTORY AND WORK OF THE FIELD NOTES DIVISION

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

The division of field notes is the least known and, to many people, the most obscure of any division of your State Department of Agriculture. Because of its technical nature, and due to the fact that it is really a depository of old records, interest in it is not so lively as that in some of the more active branches of the department. But in point of state history, it is probably the most interesting of all. Its records give a picture of the earliest days of Florida's settlement.

This division was established in 1907 by an act of the state legislature. When it was made known to the State of Florida by the United States government that the United States office of Surveyor-General would be discontinued, it became necessary for the state to make some provision to take care of the many and important records of that office. Consequently, the field notes division under the State Department of Agriculture was established by legislative authority "to provide for the reception and safekeeping by the Commission of Agriculture of the field notes, maps and records in the office of Surveyor-General appertaining to land titles in Florida."

As to the term "field notes," a word of explanation may be acceptable here. Field notes are the annotations of surveyors in making up plans and surveys. They are indispensable as records. They are evidence that we are continuously trying to find our bearings in this land upon which we live. Every competent surveyor's work is valuable because of the field notes he makes on it.

The fact that the federal government no longer maintains its office of Surveyor-General in Florida does not mean that the whole area of the state has been surveyed and that the records on file in the field notes division stand as final records. To the contrary, United States engineers are, from time to time, surveying different parts of the state and these new field notes are filed in Washington at the General Land Office and copies are

sent to the field notes division here. The latest survey is always accepted as the most accurate, hence the one to be used. The original field notes of the United States surveys of this state are filed in this office. The price of copies of these is fifty cents per section and six to twelve dollars per township, which only pays for actual work and material in making copies. Photostatic copies of township plate may be obtained for fifty cents each.

Besides this, the field notes division is called upon from time to time by the Trustees of the Internal Improvement Fund, the State Board of Education and the Land Office at Washington for information and for specially prepared certified copies of field notes and plats for which there is no charge. Nevertheless, time and labor are required to prepare this work properly.

Much of Florida's very early history is portrayed in the records in charge of this division. And some of these rival fiction in their history. The old Spanish claims, some of which date back to the early part of the eighteenth century, are divided into bundles of "confirmed" and "unconfirmed" claims. These claims number several hundred, as may be seen from any township plat, or map of the state. These are especially numerous on the upper east coast, up and down the St. Johns River and around Pensacola in the western part of the state.

Two large claims that stand out prominently in the early history of the state are those of "The Forbes Purchase" and the Turnbull plantation development. The former, embracing one hundred square miles in the mid-western part of the state, includes the whole of Liberty and Franklin counties and parts of Leon and Gadsden counties; the Turnbull grants included over 38,000 acres scattered along the east coast of Florida, the main acreage being located at New Smyrna on the middle east coast. The Forbes claim was recognized by the Spanish government in 1804 as an adjustment for damage done by the Indians, then Spanish subjects, in two thefts from the store of Forbes, and for debts incurred by them at the same store. For this damage twenty-two Indian chiefs deeded the area in the Forbes Purchase to Forbes and the transaction was upheld by Spanish authorities. The Turnbull venture was one of colonization and attempts to introduce the culture of indigo, cane and other tropical crops

into Florida. This was done during the twenty years of English occupation of Florida, and when Spain again took over the territory she refused to recognize the land grants given under British rule. The Turnbull development proved a failure but some of the landmarks of it are yet in existence.

By far the greatest number of land grants represented by claims were made by the Spanish prior to the territorial period which began in 1882. When Florida was purchased by the United States from Spain, these confirmed claims were recognized. Many of the unconfirmed claims have since been investigated by the Boards of Commissioners appointed by Congress for that purpose, found valid and confirmed by different acts of Congress.

The field notes division will supply information on its work and records if request is made for it. For further information write your State Department of Agriculture, Tallahassee.

FLORIDA'S DAIRY AND MILK INSPECTION

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

Florida's first dairy law was passed in 1929, and was revised and strengthened in 1931. The Ice Cream law, or the Frozen Desserts law, was passed in 1933. Since the passage of the state milk law there has been greater development in the dairy industry than in any ten years preceding that time. The industry has made remarkable improvement in methods and equipment, so that our dairies in Florida are now as good, or better, than dairies found in other states. The enforcement of these laws was charged to your State Department of Agriculture and as a result of this sale, the milk inspection division was created. It is the purpose of this brief sketch to tell something of this inspection.

The history of milk and dairy inspection in Florida begins with the cities, however. Jacksonville inaugurated the first milk inspection in the state in 1910 and the other large cities soon followed. In fact, in other states likewise, milk inspection began with the cities for it was the commercial handling of milk, induced by the growth of cities, that created the necessity for its regulation and sanitary production.

The dairyman's lot was never an easy one. But the conscientious dairyman has the satisfaction of knowing that his industry affects vitally more people than any other in matters of health. Hence, it's great importance and concern to everyone. Had you ever paused to think of all the factors besides the cow that enter into the dairyman's business of getting the right kind of milk to his consumer? We sometimes think he must be a wizard to do all of the various tasks he has to do before he finally sets that bottle of milk down at the door each morning. Especially, there are two divergent directions taken by the business of dairying in its function of serving the public with milk, and these are the production and the marketing. Dairy farming is a business in itself and requires all the time, thought and the energy of the man who carries it on. Likewise, the selling of milk is a business complete in itself and the creation and main-

tenance of an organization competent to render the prompt and reliable service necessary for the city man, to deal understandingly with him, and to collect payment for service rendered, can hardly be done by one absorbed in the problem of production. Yet both of these are often required of the dairyman and he does them.

The establishment of grades gives every dairyman the opportunity to produce the kind of milk he wants and to sell it at the price it merits. A regulated supply furnishes the conditions under which the dairy business prospers most, for it eliminates unfair competition and establishes public confidence in the product. Hence, all the advantages of the state milk law are not entirely on the consumers' side.

The purposes of the Florida milk law are "to secure to the people of Florida the assurance that milk and milk products sold or offered for sale to the public are produced under sanitary conditions and are wholesome and fit for human consumption, and being offered to the public under their correct designations as to grade and quality and as to source of production." And added to this the state milk inspection work is being done with the idea of service to the dairymen, helping them with their problems in a spirit of co-operation rather than one of criticism. Many of the smaller cities of the state have no milk inspection of their own and these are dependent upon the state law enforcement for grade and quality in milk. Assistance is given this class of cities and towns through supervision that helps them to develop workable ordinances and regulations for their particular localities under their individual conditions.

Since October 1, 1929, a staff of four competent and experienced dairymen have been employed in the milk inspection division. Each man has had actual experience in operating dairies and milk plants. They know Florida conditions, know the problems of the Florida dairyman and are in a position to be of actual service to the dairymen of the state. They serve not only as inspectors, but they also advise the dairyman on all phases of his operations, such as his feeding problems, culling his herd, purchase of new animals for his herd, purchase of equipment for his dairy, the remodeling of his dairy barn and milk room, and building of new dairy buildings.

As a direct result of the milk inspection carried on by your State Department of Agriculture, great advancement has been made in the state's dairy industry. This growth is shown by increase in the number of dairy cows milked, the great improvement in the quality of the individual animals in the dairy herds and in the production per cow which has noticeably increased. The equipment used in the dairies has also been greatly improved and modernized. In many of them the boilers, sterilizing boxes, bottle fillers and cappers, buckets, etc., have been replaced with new and up-to-date equipment, and great improvement has been made in dairy barns and milk rooms. Also, milk plants have so improved the appearances of their plants that today they are as up-to-date as those in any other state.

Before 1929, large quantities of milk were imported from other states. Since 1931 very little fluid milk has been brought into Florida from other states; that is, dairying has so developed during the past five years that Florida dairymen are now supplying the milk that formerly came from Tennessee, Virginia, Georgia and other states. However, even with this promising prospect, Florida's per capita consumption of milk is not large and this consumption could be further increased. As a result of the passage of the Frozen Desserts law the quality of ice cream sold in Florida has been much improved. Approximately three and one-half million gallons of ice cream are made annually from Florida milk. All ice cream manufacturing plants are inspected as to sanitary conditions of the plant, quality of the products, etc.

The milk inspection division will be pleased to answer all questions regarding any of the subjects taken up here, or other questions relating to its functions. Just address, State Department of Agriculture, Tallahassee.

FACTS ABOUT FLORIDA'S BUREAU OF IMMIGRATION

BY COMMISSIONER NATHAN MAYO

State Department of Agriculture

By constitutional authority, your State Commissioner of Agriculture is charged with keeping the Bureau of Immigration. In the details of performance of these duties the legislature has, from time to time, made new provisions and regulations that extended the scope of this bureau.

It prepares and edits publications going out from the department, such as special bulletins for farmers, all advertising literature, advertisements in magazines and other publicity for the department. It also prepares all fair exhibits sent out by the department and supervises all enumerations of agriculture and manufacturers. And too, it is empowered to take a population census every ten years. The sixth state census was taken in 1935.

A census has been called a snapshot of the population, and surely it brings to light many interesting facts respecting the people of a given territory. It tells of the distribution of population and can point the way to explanations of the unusual; it throws light upon changes in births, deaths, marriages and other influences in population trends. The census and registration enable us to look into how the population has become what it is: the races, nationality, school age, etc.

In periods of earlier settlement of our country, the term immigration had probably a different meaning from what it now has. The day of vast, herd-like migrations of people to new lands seems to be past. People locating in new homes seek reasons for doing so with more intelligence than was used in past generations. This paves the way for a better development of new land and for the assurance of a better class of citizens where the choice of location is sensibly made.

To this bureau go all letters and inquiries from people who want information about locating in Florida to farm or to follow special lines of agriculture. There are over 100 different publications edited, printed and issued by this office. These are upon a great variety of subjects, the result of a complexity of interests

such as is found in the diversity of agriculture in Florida. Tons of mailing matter are sent out yearly to give information upon these subjects and millions of copies have been circulated in recent years.

These publications require special work in their preparation and, while the department in preparing them, seeks specialized information and data where advisable, it does not conduct experiments for complete and exhaustive data on any one product or line. It requires, of course, that the data be exact and authentic, and have real value as information, but the purpose in issuing its bulletins differ from those of other bureaus and departments. It seeks to inform those wishing general information on special subjects. Experimental farming is not included in the activities of this department, but is done by the State Experiment Station.

This emphasizes the distinction between this department's work and that of other governmental branches, such as the work of the experiment stations of the state government. There are no farming experiments conducted by the State Department of Agriculture. This is done under the college of agriculture of the University of Florida. Nor are crop production estimates made and yearly crop statistics given out by this office; but a census—Agriculture and Manufacturers—is taken every five years and the results are compiled and enumerated by the bureau of immigration.

Fairs and exhibits at show places for advertising the state are included in the activities of this office. The exposition at Chicago, "A Century of Progress," in which Florida participated and which was attended by more than 38,000,000 people, was one of the great accomplishments of this decade. Its educational value was so great that, at this early date, no accurate summary of it can be given. Florida's identification with this enterprise was of inestimable value to our state in an advertising way. An exhibit was placed in Rockefeller Center in 1935-1936; Cleveland, Ohio, in 1936, and at Birmingham, Ala., summer of 1936. From inquiries received, estimates are now being made to ascertain what the visitors of our several exhibits want to know most in regard to Florida and what places in the state

attracted most attention. The Bureau's advertisements in leading magazines has reached a combined circulation of 49,000,000.

We grow commercially sixty different kinds of vegetables, seventy-five different kinds of fruits and nine kinds of nuts.

For more information concerning this department, or Florida, write to the State Department of Agriculture, Tallahassee.

DISTINCTIVE FACTS

Our mean annual temperature is from 68 to 73 degrees.

The State of Florida is unique in many ways. The State Constitution prohibits:

1. The sale of State bonds.
2. An act of the 1933 session of the Legislature exempts homes up to a valuation of \$5,000.00. We quote the Act, adopted at the general election November 6th, 1934.

"There shall be exempted from all taxation, other than special assessments for benefits, to every head of a family who is a citizen of and resides in the State of Florida, the homestead as defined in Article X of the Constitution of the State of Florida up to the valuation of \$5,000.00; provided, however, that the title to said homestead may be vested in such head of a family or in his lawful wife residing upon such homestead or in both."

3. Taxing of new industries until 1948. We quote excerpts from an act of the 1929 session of legislature, and which was adopted at general election November 4th, 1930:

"For a period of fifteen years from the beginning of operations, all industrial plants which shall be established in this State on or after July 1, 1929, engaged primarily during said period in the manufacture of steel vessels, automobile tires, fabrics and textiles, wood pulp, paper, paper bags, fiber board, automobiles, automobile parts, aircraft, aircraft parts, glass and crockery manufacturers and the refining of sugar and oils, and including by-products or derivatives incident to the manufacture of any of the above products, shall be exempt from taxation, except that no exemption which shall become effective by virtue of this amendment shall extend beyond the year 1948. The exemption authorized, shall not apply to real estate owned and used by such industrial plants except the real estate occupied x x x for housing industrial plants, warehouses, storage, trackage, and shipping facilities."

In most counties, the State educates, free, children of tourist who spend their winters in Florida.

It has more hard-surfaced highways mileage per capita, and the greatest area of salt and fresh water fishing of any state.

We have thirty-five million acres of land and only about one million six hundred thousand people. Our agricultural opportunities are unlimited.

MANUFACTURERS OF FEEDING STUFFS

The following is list of Feed Manufacturers who have filed their oaths of analysis with this Department for years 1934-1935:

Abilene Flour Mills.....	Abilene, Texas
Acme Mills.....	Hopkinsville, Ky.
Allen & Co., E. T.....	Atlanta, Ga.
Alco Feed Mills.....	Atlanta, Ga.
Allied Mills, Inc.....	Chicago, Ill.
Allisons Feed Store.....	Miami, Fla.
Alpers Bros. Milling Co.....	San Francisco, Calif.
American Maize Products Co.....	New York, N. Y.
American Maid Flour Mills.....	Houston, Texas
Americus Oil Co.....	Americus, Ga.
American Rice Milling Co.....	Crowley, La.
Amco Feed Stores, Inc.....	Tampa, Fla.
Anheuser-Busch, Inc.....	St. Louis, Mo.
Applegate Grain Co.....	Pensacola, Fla.
Archer-Daniels-Midland Co.....	Minneapolis, Minn.
Arlington Oil Mills.....	Arlington, Ga.
Ashcraft Wilkinson Co.....	Atlanta, Ga.
Atlanta Milling Co.....	Atlanta, Ga.
Atlantic Supply Co.....	Baltimore, Md.
Bauman Feed & Supply Co.....	DeLand, Fla.
Baton Rouge Rice Mill.....	Baton Rouge, La.
Bay Chemical Co., Inc.....	New Orleans, La.
Baker & Brother, H. J.....	Jacksonville, Fla.
Ballard & Ballard Co., Inc.....	Louisville, Ky.
Baltimore Feed & Grain Co.....	Baltimore, Md.
Beaumont Rice Mills.....	Beaumont, Texas
Bernd Co., G.....	Macon, Ga.
Bennett, Leslie.....	Pensacola, Fla.
Bewley Mills.....	Ft. Worth, Texas
Birdsey Flour Mills.....	Macon, Ga.
Bisbee Linseed Co.....	Philadelphia, Pa.
Elair, Joe.....	Miami, Fla.
Blamberg Bros., Inc.....	Baltimore, Md.
Black, J. C.....	Lee, Fla.
Brandon Mill & Elevator Co.....	Marianna, Fla.
Brown, A. L.....	Eustis, Fla.
Bruce Milling Co.....	Valdosta, Ga.
Broward Grain Co., Inc.....	Ft. Lauderdale, Fla.

MANUFACTURERS OF FERTILIZERS

List of Fertilizer Manufacturers who have filed their oaths of analysis with this Department for years 1934-1936:

American Cynamid Co.....	New York City
American Agricultural Chemical Co.....	Jacksonville, Fla.
American Agricultural Chemical Co.....	Atlanta, Ga.
American Chemical Co.....	Atlanta, Ga.
Armour Fertilizer Works.....	Jacksonville and various
Barrett Co.	New York, N. Y.
Bartlett, Elise	Ocala, Fla.
Bilgore Fertilizer Works.....	Clearwater, Fla.
Blue Belt Fertilizer Co.....	Savannah, Ga.
Bradley Mines	Floral City, Fla.
Burke, G. J.....	Lakeland, Fla.
Calcium Phosphate Co.....	Bartow, Fla.
Calcium Products Corporation.....	Guatts Quarry, Ala.
Cartledge Co., R. H.....	Cottondale, Fla.
Chase & Co.....	Sanford, Fla.
Chilean Nitrate Sales Corporation.....	New York, N. Y.
Colloidal Phosphate Sales Co.....	Dunnellon, Fla.
Connell & Shultz.....	Inverness, Fla.
Coronet Phosphate Co.....	Plant City, Fla.
Cooperative Citrus Culture Ass'n, Inc.....	Mt. Dora, Fla.
Cuban Guano Importers, Inc.....	Miami, Fla.
Cytro Products Co.....	Bradenton, Fla.
Davison Chemical Co.....	Baltimore, Md.
Dixie Phosphate Co.....	Ocala, Fla.
Dixie Lime Products Co.....	Ocala, Fla.
Dolcito Quarry Co.....	Birmingham, Ala.
Dolomite Co.....	Haines City, Fla.
Dothan Guano Co.....	Dothan, Ala.
Everglades Fertilizer Co.....	Ft. Lauderdale, Fla.
Faust, Jr., Fred A.....	West Helena, Ark.
Ferguson, L.	Tarpon Springs, Fla.
Florida East Coast Fertilizer Co.....	Homestead, Fla.
Florida Favorite Fertilizer Co.....	Lakeland, Fla.
Florida Fertilizer Corporation.....	Orlando, Fla.
Florida Lime Co., Inc.....	Ocala, Fla.
Florida Fruit Cannery.....	Frostproof, Fla.
Florida Fertilizer & Chemical Corporation.....	Miami, Fla.
Florida Fruit Co.....	Ft. Meade, Fla.
Florida Dolomite Co.....	Pembroke, Fla.
Ford Motor Co.....	Dearborn, Mich.

Ft. Ogden Citrus Growers Association.....	Ft. Ogden, Fla.
Ft. Meade Packing Co.....	Ft. Meade, Fla.
Fugazzi Bros.....	Clearwater, Fla.
Georgia Fertilizer Co.....	Valdosta, Ga.

FERTILIZER AND FEED BRANCHES

ACCUMULATED TABLE OF RECEIPTS FROM INSPECTION AND SALE OF STAMPS AND TAGS YEARS 1905 TO JUNE 30, 1936

For the year 1905	\$ 31,534.86
For the year 1906	42,790.19
For the year 1907	43,535.71
For the year 1908	46,805.92
For the year 1909	56,822.60
For the year 1910	61,971.05
For the year 1911	71,353.25
For the year 1912	82,820.55
For the year 1913	87,721.12
For the year 1914	89,968.55
For the year 1915	80,312.37
For the year 1916	85,240.49
For the year 1917	86,719.26
For the year 1918	83,846.59
For the year 1919	103,332.12
For the year 1920	108,229.58
For the year 1921	114,535.51
For the year 1922	137,716.94
For the year 1923	153,691.74
For the year 1924	149,742.53
For the year 1925	148,242.83
For the year 1926	166,310.05
For the year 1927	173,036.07
For the year 1928	181,888.02
For the year 1929	165,702.82
January 1st to June 30, 1930	101,418.32
July 1, 1930, to June 30, 1931	169,354.95
July 1, 1931, to June 30, 1932	155,475.89
July 1, 1932, to June 30, 1933	160,667.19
July 1, 1933, to June 30, 1934	163,252.34
July 1, 1934, to June 30, 1935	180,107.39
July 1, 1935, to June 30, 1936	188,076.26

MILK INSPECTION DIVISION

July 1, 1934 to June 30, 1936—Two Years

There are fifty milk plants, one thousand dairies of six or more cows, fifty-seven wholesale frozen desserts manufacturing plants and one hundred fifteen retail frozen desserts manufacturing plants in Florida under the inspection and supervision of the four inspectors who compose the Milk Inspection Division of the Florida State Department of Agriculture.

Milk and milk products are highly perishable and easily contaminated, and therefore it is essential that the source of supply of these products and the methods of handling them be closely supervised.

Florida dairymen and plant operators as a whole are aware of the importance of sanitation in the handling of dairy products, but it is human nature to become careless at times, and the frequent visits of the inspectors serve to remind them of their responsibility to the consumers.

In addition to seeing to it that the dairies and plants are kept in a sanitary condition, the inspectors have advised changes in equipment and methods that would make the products of higher quality and make the work easier and more efficient.

Although the dairymen and plant operators have experienced the same financial difficulties as other lines of business, they have complied readily with requests for improvements, and they are to be congratulated on the high standards now existing in Florida dairies and milk and ice cream plants, which are now equal to conditions existing in other dairy states where the changes were made more gradually.

It is very difficult to maintain an accurate list of dairies, as changes take place almost daily. However, we are giving herewith a list of dairies which is as nearly correct as it could be made.

There are fewer changes taking place among the milk plants, and we believe the accompanying list is fairly accurate.

The large production centers are naturally close to the large consuming centers, such as Miami, Jacksonville, West Palm Beach, Tampa, St. Petersburg, Orlando, Lakeland, Daytona Beach and Pensacola.

During the past two years the number of cows in the Florida dairies has increased so that each community can supply its own demand for milk, and there is very little milk shipped from one part of the state to another for consumption. It is very seldom necessary to ship any milk into Florida from another state. With the unusually large number of tourists in the State last winter, it was necessary to bring in only 1,300 gallons of fluid milk. Due to our fluctuating population, it continues to be necessary to bring in large quantities of sweet cream during the winter season. Approximately 400,000 gallons of sweet cream were shipped into Florida during the past year.

This cream is brought into Florida only from firms that hold permits from the Milk Inspection Division of the State Department of Agriculture. These permits are not issued at random; a thorough inspection is made by one of the Florida milk inspectors of the plants handling this cream and of the dairies supplying these plants. Last year the cream imported into Florida came from ten plants in the states of Georgia, Alabama, Tennessee, Indiana, Ohio, Wisconsin and Michigan.

During the past two years a new phase of dairying has been started for Florida farmers. The Kraft-Phenix Cheese Corporation of Chicago established a cheese manufacturing plant at Thomasville, Georgia. As a result, two hundred or more Florida farmers have been milking cows and selling milk to this cheese plant supplying about half of the milk required by this plant, which has an output of from 500 to 1,000 pounds of cheese a day.

At one time it was thought impossible to make cheese in the South, but it has been proven in recent years that good cheese can be made in any part of the United States where milk can be obtained at a reasonable price.

Those Florida farmers who have been selling milk to the Thomasville plant seem well pleased with the returns. Of

course the commercial dairyman who has a good retail route and who has a well equipped dairy could not afford to sell his milk to a cheese plant; but on the other hand, there are many farmers in Florida who sell other farm products and could milk a few cows as a side-line, but could not retail milk. A farmer in such a position, if he had a cheese plant as a market, would find it to his advantage to keep a few cows and sell the milk. He would not receive a large return for his labor, but he could market grass and forage crops, for which he would have no market, through his cows. The cost and labor involved in milking one cow would be about equal to the cost of growing a bale of cotton, and the returns at the end of the year would be about the same. On the average farm the milking is frequently done by the women, and we are inclined to believe that milking cows twice each day is less strenuous labor than chopping, hoeing and picking cotton.

The number of ice cream manufacturers in Florida has increased very materially during the past two years; in fact, the number of retail manufacturers has doubled. We are not in position to say whether or not the consumption of ice cream has increased in proportion.

A few years ago ice cream was considered a luxury, but it is now rightly considered an important food product. Milk and cream are very important in the diet of both young and old, and some people eat these products only in the form of ice cream.

Many of the northern states have a greater per capita consumption of ice cream than Florida, and this is not as it should be, because our long seasons of warm weather when ice cream is so enjoyable should place Florida far in the lead on per capita consumption of ice cream. Perhaps with the marked increase in the number of manufacturing plants, Florida will soon take her rightful place in this respect.

Since the advent of the counter freezer a few years ago a large number of retail ice cream plants have been established in all parts of the State. These plants in many cases are small, but they are well equipped.

This increased number of small plants has increased the inspection work very materially. There are more than twice the

number of plants to inspect that there were two years ago, which requires more time and more driving by the inspectors each month to inspect them.

Ice cream manufacturing plants are scattered throughout Florida. Of course there are more of them in the larger centers of population, but we find them in small rural communities. Also with the improved methods of refrigeration, ice cream is now being transported by truck to many rural communities that a few years ago seldom saw ice cream except when it was made at home for some special occasion.

We are giving herewith a list of retail and wholesale ice cream manufacturers selling ice cream and other frozen desserts in Florida.

LIST OF FLORIDA FROZEN DESSERTS MANUFACTURERS

November 17, 1936

WHOLESALE (Out of state plants listed hold Florida licenses)

- Alfar Creamery Co., 456 Flamingo Drive, West Palm Beach, Florida.
- Bayhead Dairies, Inc., Panama City, Florida.
- Berrier's Ice Cream Co., 217 W. 8th St., Jacksonville, Florida.
- Booker Ice Cream Company, DeLand, Florida.
- Dothan Ice Cream Company, Dothan, Alabama.
- Florida Milk Company, St. Petersburg, Florida.
- Foremost Dairies, Inc., 2903 College Street, Jacksonville, Florida.
- Foremost Dairies, Inc., Valdosta, Georgia.
- Fort Pierce Dairy Store, 225 Orange Ave., Ft. Pierce, Florida.
- Gainesville Ice Cream Company (Mr. C. E. Perry), Gainesville, Florida.
- Golden Seal Dairies, Inc., 209 W. Reynolds St., Plant City, Florida
(F. D. Goff).
- Good Humor Ice Cream Company, 260 S. W. 17th Ave., Miami, Florida.

TOTAL NUMBER OF COWS IN COMMERCIAL DAIRIES
OF FLORIDA

43,100

BIENNIAL REPORT OF MILK INSPECTION DIVISION

The above is a list of the commercial dairymen of Florida who keep more than five cows. The number of cows as listed by counties includes only the cows in commercial dairies and not the entire number of dairy cows in the State.

The total number of cows in the commercial dairies of Florida is 43,100. If we add to this the number of cows in the smaller dairies and the number of family cows, we will then have the total number of dairy cows in Florida, which would not be far from 100,000 head.

The question is often asked, "How much milk is produced in Florida?" The 43,100 cows in the commercial dairies of the State are milked for 300 days during the year, and with an average production of one and three-fourths gallons per day per cow, the total milk production for the year would be 22,627,500 gallons of milk. Add to this the production of the small dairies and the family cows, and you will have a total production of around 45 or 46 million gallons of milk per year.

The list of dairymen of the State and the number of dairy cows in each county is very changeable. Dairymen go into business and go out of business every month in the year; and dairymen buy and sell cows every day. Therefore, it is impossible to keep an accurate list at all times.

This we believe is the first attempt made to list the dairymen of the State by counties and also to list the dairy cows by counties. We often have calls for just such lists. This list is of value, or at least it should be of value, to a great many people of the State.

Very few people know where the large dairy centers of the State are located. It is of interest to note that the large dairy centers of the State are also the large tourist centers of the State. This is as it should be, as the larger centers of population use more milk. There was a time, five or six years ago, when this was not true. At that time milk was shipped from point of production to point of consumption. Dairying has

increased in those centers where more milk has been needed, and today there is very little movement of milk from one part of the State to another part of the State.

Some have the feeling that there are not as many dairy cows in Florida as formerly due to the number reacting to Bang's disease. However, we find that the dairymen have not only replaced all reactors, but have in a good many instances increased the number of cows in their herds.

Another important factor that cannot be overlooked is the fact that in the majority of cases where cows have been added to the herds to replace the reactors to Bang's disease, the new cows have been better producers. This means that more gallons of milk are being produced by the herds in Florida with the same amount of feed. This is one of the important factors that every dairyman must know if he is to be successful in the dairy business.

The dairyman who milks twenty cows twice each day and obtains an average of one and one-half gallons of milk per day per cow cannot compete with the dairyman who milks twenty cows twice each day and obtains two gallons or two and one-quarter gallons of milk per day per cow. There are some herds of thirty to fifty cows in Florida that are producing two and one-half gallons per day per cow.

For further information, write Department of Agriculture, at Tallahassee, or John M. Scott, Chief Milk Inspector, at Gainesville, Fla.
